ABSTRACT

A method of sending data from a first party participating in a telephone call to
a second party participating in the telephone call, comprising, in the terminal

5   of the first party, storing, as a consequence of the telephone call, identifier
data that identifies the second party; using the stored identifier data to
determine automatically a destination address for a data message; and
sending, during the telephone call, the data message with the automatically
determined destination address. A method for sending data from a first party

10 participating in a telephone call to a second party participating in the
telephone call, comprising, in the terminal of the first party: providing, while
the telephone call is on-going, a user selectable option to transfer data to
another party participating in the telephone call without user specification of a
destination address.
